Directly actuated seat valves

2/2- and 3/2-way

Features

- Directly actuated directional seat valve controlling pressurised media.
- The valve seat seals hermetically preventing internal leaks.
- All parts are made of corrosion-resistant materials, and they are easily replaceable.
- Valve design in a structural plate form
- On request, the valve can be equipped with other actuations than the electromagnet, e.g. hydraulic or pneumatic cylinder actuation, manual pushbutton operation
- In addition, the individual actuations can be supplemented with a maintained-contact function

Function of 2/2-way valve

The force (1), generated by the actuation, acts through the lever (2), the tappet (3) on the ball (4) and presses it out of the valve seat (5). This is used to connect lines P and A, see Example. The ring (6) supports the flange seal from the inside. The volume flow is limited by the entire flow resistance.

Depending on the arrangement of the valve seat (5) and ball (4) the valve will have the basic position normally closed (NC) or normally open (NO).

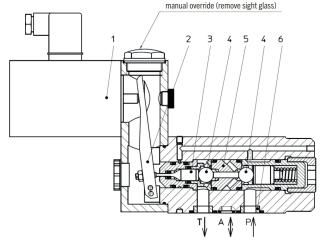

Function of 3/2-way valve

The force (1), generated by the actuation, acts through the lever (2), the tappet (3) on the ball(s) (4) and presses it out of the right valve seat (5) and into the left valve seat (5). This is used to connect lines P and A and shut off line T, see Example. The ring (6) supports the flange seal from the inside. The volume flow is limited by the entire flow resistance.

The 3/2-way valve is provided with a "negative overlap". During the changeover process, connections P, A and T are briefly connected with each other. The changeover occurs so fast that the hydraulic effects are negligible. By design, a 3/2-way valve always requires the connection of a T-connector; only then a proper switching function can be ensured.

Depending on the design of the valve insert a valve with the basic position "A \rightarrow T NO" (lines A and T are connected) or "P \rightarrow A NO" (lines P and A are connected) is provided.

Directly actuated seat valves DN10 | PN700 | 401/min

2/2- and 3/2-ways

Technical data measured with HFA medium 97/3%, at 20°C

| General | | |
|---|--|--|
| Weight | 8,1 kg | |
| Installation position | any | |
| Ambient temperature | -10 to 50°C (hydraulic fluids, heed standard requirements) | |
| Material Valve parts Material Seals | Stainless steel, bronze except electromagnet FKM, PTFE | |
| Hydraulic | | |
| max. operating pressure of connector P | 700bar | |
| max. operating pressure of connector A | 700bar | |
| max. operating pressure of connector T | 50bar | |
| max./min. control pressure of connector Z | see Order information | |
| max. volume flow $P\rightarrow A$ | 40 l/min | |
| max. volume flow A→T | 40 l/min | |
| specified direction of flow | P→A, A→T | |
| Pressure fluid - Medium - Temperature range - Medium - Quality - Cleanliness class, filter fineness - Viscosity | water, HFA 5 to 50°C see Hauhinco requirements on water and HFA media class 20/18/15, filter fineness 25 μ m 0,6 bis 100 mm²/s | |
| Pressure fluid - Medium - Temperature range - Medium - Quality - Cleanliness class, filter fineness - Viscosity | mineral oil, HLP -10 to 50° C acc. to DIN 51524 Class $20/18/15$, filter fineness $25\mu m$ $0,6$ bis 100 mm ² /s | |
| Use of other pressure fluids on request. | | |

The covers (6) are designed with a viscosity of approx. $1.0 \text{ mm}^2/\text{s}$; if a medium with a substantially different viscosity is used, the covers must be selected such that the maximum admissible volume flow is not exceeded.

| Electric | | |
|--------------------------------------|---|--|
| Voltage | 24 VDC, 110 VAC (96 VDC), 230 VAC (205 VDC) | |
| AC grid, admissible tolerance | ± 10% | |
| AC grid, admissible frequency | 50 to 60 Hz | |
| Power consumption | 55 W | |
| Operating time | 100% ED | |
| Degree of protection acc. to EN60529 | IP65 | |
| max. switching rate | 1 Hz | |

Order information

| Included in the scope of supply | |
|--|---|
| Mounting screws of the valve | Cheese-head screw M10 |
| Cable socket of the valve solenoid - Supply voltage 24 VDC - Supply voltage 110 VAC - Supply voltage 230 VAC | according to DIN 43650 — type of design A max. 100 VA, LED-display + Z-diode, IP65 max. 1.5 A, bridge rectifier, LED display, IP65 max. 1.5 A, bridge rectifier, LED display, IP65 |
